MINI PROJECT SYNOPSIS

Introduction

Aim:

To prepare a Restaurant Management System

About the project:

This software is developed as a beginner level mini project in C programming language by using the concept of file handling.

Features of the Project:

Restaurant Management System-

Person will be given choices like; Generating Invoice, saving his invoice and Reading that invoice through file handling concept. The person has to his basic details like his name, no. of items, quantity etc and his invoice will be generated and the total bill will be calculated (including GST) and will be displayed on screen. All these details will be stored in a text file.

Operations used:

- File Handling
- Structure
- Array
- Loops
- Conditional statements
